

Race Player Release Notes

Version 3.1.0

- ✓ Update My Races button is green to call attention.
- ✓ Player supports live marks: “start boat”, “start pin”, “finish boat”, and “finish pin”. Tracks with these names will be drawn as marks and not be included in the auto camera tracking.

Version 3.0.0

- ✓ Performance reports now work when raw track files used to create a race end before all boats finish
- ✓ Added Auto-Camera button on toolbar
- ✓ Added message to replay window when auto camera mode is OFF
- ✓ Added mouse click selection of boats
- ✓ Added mouse-over tool tip to race display
- ✓ Mouse click selection of boats now tied to “Boats” tab boat selection
- ✓ Elapsed time now displayed on main race window during pre-start and up to 30 seconds into the race.

Version 2.7.0

- ✓ Fixed bug where playing partial tracks would cause the whole race to disappear
- ✓ Reports now available if the **PerformancePackageUser** role is set.
- ✓ Tooltips added to some of the main page controls

§ New Toolbar

◆ Follow Boat

- § User can select a boat to follow. Sticky with user ID so it will continue to follow the same boat from race to race.

§ Faster/slower buttons right in the toolbar. Speed can now go down to real-time (1 FPS)

§ Zoom in/Out button on toolbar. Operate the same as the +/- buttons.

§ Boat Names button toggles boat name display

- ✓ Settings tab renamed to Advanced.
- ✓ Controls now in toolbar removed from Advanced tab.
- ✓ Import button in advanced tab allows user to copy race files from USB or CD drives.

✓ **My Races**

- § Window split into a tree browser and a race list window
 - § Race list window only shows races below the currently selected node in the tree.
 - § Tree nodes are ordered by most recent to have a race posted, so the club with the most recent races posted will be at the top. The most recent series will be at the top of the series level of the tree. The same is true with the fleets and races. Tree cannot be sorted.
 - § User selected tree node is sticky with user login.
 - § Playing selected races with no races selected in the race window will play all races listed.
- ✓ Slider bars in main window and race selection window are now sticky with user login.
- ✓ Player zoom and speed are now maintained between races when playing a loop.

Version 2.4.0

Support for Logos

Version 2.3.0

Supports Team Racing

Includes smart DN synch code.

Version 2.1.4.1

Player now checks for race files copied into local directory

Files are re-downloaded if they cannot be found locally.

E Store now opens an independent browser window.

Version 2.1.4.1

HTTP Downloads

Version 2.1.0.0

Added version number to settings tab.

Changed default list sorting so that when sorting by a column other than the date, the secondary sort column is date.

Version 2.0.0.34

The player now saves the local configuration info in a .dat compressed XML file rather than a raw XML file. New file name is player.dat.
